

## SLOTTED ROUTING CABLE MANAGERS

Built with narrow and wide fingers, the Slotted Routing Cable Manager is a cross between the Finger Duct Cable Manager, the D-Ring Cable Manager, and the Cable Routing Blanks. The narrow fingers allow for separation when routing cables between switches and patch panels, while the wide fingers help to retain cables during and after installation. For added protection and storage, a cover is also included to enclose the cables and create a clean look for your rack. Flanged fingers are an extra feature to help when routing cables, and to help contain cables should the cover be lost or temporarily removed. Rear cut outs allow cables to pass through the back of the unit – a great feature when mounting two units back to back. If mounting two units back to back, the Finger Duct Cable Manager is another option for the front installation. Messy and unmanaged cables are no longer an issue with the Slotted Routing Cable Manager.

### FEATURES

**Cover Included** - The easy, slide on cover helps to store and protect cables, and as an added bonus, will create a clean and sleek look for your rack.

**Flanged Fingers** - Flanged fingers help to contain cables when routing them through the slotted ducts. If the cover is ever lost, the flanges will also help to contain these cables.

**No Mess Maintenance** - Cables will now be organized in such a fashion that little effort is needed when having to locate or change a cable. Searching through a jungle of cables is no longer necessary, making maintenance and labor costs decrease as a result of this organization.

**Durable Material** - Constructed from steel and finished with a textured powder coat, this cable manager is more durable and rigid than plastic finger duct cable managers.

**Rounded Corners** - All corners are rounded to avoid snagging or damaging cables, hands, and/or other devices.
