

ACRYCELL™ SEALING TAPE

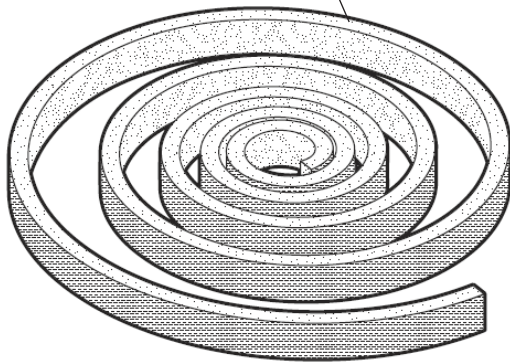

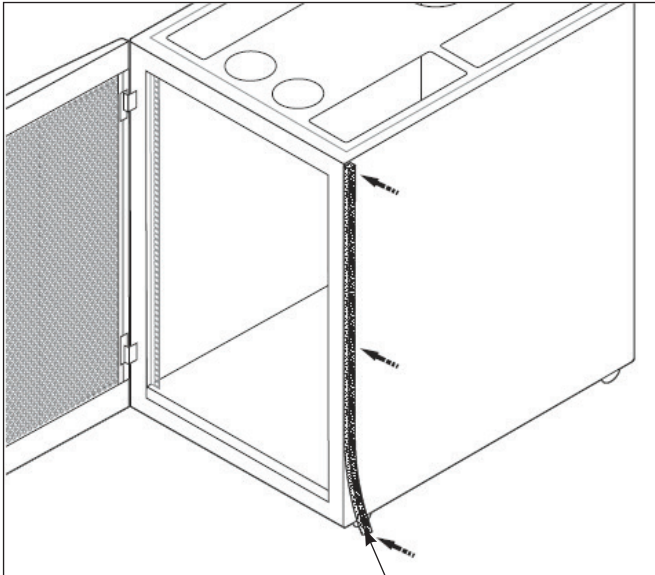

AisleLok Acrycell Sealing Tape is an innovative non-particulating designed to seal openings between racks. Making it the premium choice for the data center. Its revolutionary sealing technology greatly reduces costly bypass airflow, increasing usable cooling unit capacity, and ensuring maximized efficiency from HVAC equipment.

Part No.	Description
GLAL10108-OO1CP	Thickness range .50" -.20", Width .39"W, Length 32.8'
GLAL10108-OO2CP	Thickness range 1.0" -.50", Width .39"W, Length 18.4'
GLAL10108-OO3CP	Thickness range 2.0" -.87", Width .98"W, Length 8.5'

*Thickness measurements indicate expanded and compressed thickness of the tape
Each product comes in a case pack of 5.*

FEATURES

- Non-particulating tape is safe for the data center and ensures a durable secure seal between the racks/enclosures
- AisleLok products are compliant with directive 2002/95/EC of the European Parliament and the Council on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electric Equipment (RoHS)
- Time release expansion allows product installation without disturbing cables
- Conforms to non-uniform spaces when completely expanded
- Compact size for easy portability

BENEFITS

- Supports increasing cabinet density
- Increases existing cooling unit capacity
- Reduces the need to purchase additional cooling units
- Improves IT equipment reliability and extends equipment life

UNIQUE ACRYCELL TECHNOLOGY

Confirmed by a 3rd party laboratory's accelerated aging test this zero-particulate sealing tape is truly "Data Center Safe" and also offers:

- Time release expansion that ensures a tight seal around cables and other impediments
- Moldable physical quality that forms a tight seal on uneven surfaces and gaps
- Customizable tape unrolls creating one continuous and uniform top-to-bottom seal
- "Peel and Stick" installation saves labor, time and money
- Compressed tape eliminates pinching, stuffing, or otherwise manipulating to install

SEALING EFFECTIVENESS

Acrycell sealing technology has been engineered to fill gaps tightly against airflow and particulates across a wide spectrum of widths. Confidently and cost effectively sealing gaps against errant airflow ranging from .39" - .98" in width, between racks, cabinets, or other data center equipment.

DATA CENTER SAFE SEALING SYSTEM

Confirmed "Data Center Safe", the zero-particulate, time release Acrycell sealing technology is designed to seal gaps against draft and dust between server racks, cabinets or other enclosures in the mission critical data center environment.

MOUNTING SYSTEM

- Single-sided, pressure sensitive tape with durable and field tested adhesive backing

TEMPERATURE RESISTANCE

Durable Acrycell sealing tape is both temperature resistant from -40 to 212°F (-40 to 100°C) and fire resistant to DIN 4102 Class B1.

FINISH

Black
